IMPACT BEYOND THE CODE

The ultimate **ambition** of the project extends far beyond algorithmic precision. The team is driven by a singular **mission**: to ensure that high-quality rehabilitative care is no longer a luxury, but a fundamental **right**.

By leveraging **open-source** technology and standard mobile hardware, the initiative seeks to bridge the global healthcare gap, transforming every smartphone into a **clinical ally** and bringing expert-guided **recovery** to the most underserved corners of the world.

NOTE: TherapEase is currently in active development. Interested in making an impact? Contact the developers to collaborate.
